Pharmaceutical Terms in Various Languages

The following index lists some of the commoner pharmaceutical forms and routes in English and a number of major European languages. It is provided as an aid to the non-native speaker in interpreting packaging, product information, or prescriptions written in another language, but the reader is cautioned that care is required: some terms translate poorly or not at all between languages, and the equivalences may not be exact. In addition, in many languages changes in number (singular or plural) and grammatical case can result in substantial changes to the form of words. Words in this list are given in the most neutral form, that is, singular (except for those forms such as drops or granules which are naturally plural) and in the nominative case.

Terms have been included in English and the following languages, which are indicated by the abbreviation in brackets following the term: Czech (cs), Dutch (nl), French (fr), German (de), Greek (el), Hungarian (hu), Italian (it), Lithuanian (lt), Polish (pl), Portuguese (pt), Spanish (es), and Swedish (sv). We hope to add terms in other languages once we are able to validate them.

We would like to record our gratitude to the following for their generous assistance in validating and correcting the terms in various languages: Lina Bladh, Alessandro Gabbi, Judy van Engeldorp Gastelaars, Špela Godec, Jan Horn, Montserrat Jané, Andrius Kairys, Maria Kouimtzi, Carla Oliveira, Kamila Ramešová, Elsa Simon, Gyöngyver Soós, Carina Tukukino, and Robert Wasilewski.

General Index

Entries cover drugs (by monograph title, other approved names, synonyms, and chemical names), diseases (by disease treatment review title and associated terms), and proprietary preparations (by proprietary or brand name). They are arranged alphabetically in word-by-word order. Page references give the volume and the page and column number as in A:476·1, where A refers to volume A, 476 represents the page number, and the figure 1 indicates that the entry will be found in column 1 of that page. There is no column number when the entry is in a table.
