Cyrillic Index

Entries cover drugs (by Cyrillic synonyms) and proprietary preparations (by Cyrillic proprietary or brand name). They are arranged alphabetically in word-by-word order. Page references give the volume and the page and column number as in A:476·1, where A refers to volume A, 476 represents the page number, and the figure 1 indicates that the entry will be found in column 1 of that page. There is no column number when the entry is in a table.
